

Major ice>Link Plus firmware update

There is a major *ice>Link Plus* firmware update of the whole line. New versions fix the 'iPod UI' mode bug related to 5G (video) iPod's.

iPod UI mode is improved. New functions (not available with 3G and previous iPod's):

- CD1 + FFWD/REWD = Fast Forward/Rewind
- CD2 + FFWD/REWD = Next/Previous Playlist
- CD3 + FFWD/REWD = Next/Previous Album
- CD3 + FFWD/REWD = Next/Previous Chapter

Table 1 lists the firmware and head unit compatibility of the hardware variants.

Please note, Kenwood support is moved to firmware version 3.05 which means, you do not need the old 2.11 any more.

Study the updated compatibility table on the next page.

Severity

Update is strongly advised in all cases when a 5G (video) iPod is used. In other cases update is optional.

Interoperability

Proper operation requires use of the relevant *ice>Link Plus* hardware. They are not interchangeable or replaceable with another type!

Firmware availability

Actual firmware including version history can be downloaded directly from the Dension support site in self extracting exe or zip format for MAC users. Additional binary images are available at the protected partner area of the WEB , see *Technical Support Bulletin #A0006*.
